

PLANT & ANIMAL

GENOME XXVII CONFERENCE

January 12-16, 2019
The Premier and Largest
Ag-Genomics Meeting
in the World.

IS GENOMICS IN YOUR BUSINESS PLAN?
IF YOUR ANSWER IS YES

YOU SHOULD TAKE PART IN THE LARGEST AND FASTEST GROWING
AG-GENOMICS MEETING IN THE WORLD!

"This meeting is the best opportunity to reach the researchers working on non-standard model organisms. There is a strong focus on crop plants and farm animals. There is good international representation and an excellent forum for us to interact with the thought leaders in the plant and animal communities. This is the single most important meeting for the custom array programs."

— Thermo Fisher Scientific

"PAG provides a good platform to present our research advance, allows us to meet with a large portion of our current customers and gives us the opportunity to see a number of potential new customers."

— Keygene
